IPASSAN: THE ACCESS CONTROL SYSTEM DEVELOPED AND DESIGNED BY FDI

WHAT IS IPASSAN?

iPassan is a modular IP access control system designed and developed by FDI, aiming to:

❱ Manage and protect users, resources and infrastructures,

❱ Be suitable for collective housing or tertiary buildings.

The whole iPassan system offers native features and allows the integration of additional features. iPassan was designed for medium to large residential and commercial buildings.

BENEFITS OF IPASSAN

Thanks to iPassan, FDI offers an access management solution adapted to your architecture's needs and their evolution.

❱ iPassan is easy to implement thanks to its 2-wire wiring and to its installation wizard,

❱ As being a SaaS solution, iPassan is able to remotely track events, regardless of the infrastructure and country of installation,

❱ iPassan is suitable either for construction or renovation projects,

❱ iPassan ensures access control even when the server is down.

IPASSAN, A CENTRALIZED ACCESS CONTROL SYSTEM

LOCALLY OR REMOTELY MANAGE YOUR SYSTEM

Independent of how you network your multi-door controller, you can decide whether to manage your site remotely, or locally, depending on the site's requirements.

WHICH FEATURES ?

iPassan is an open and modular system, integrating:

Native features:

- Mobile access,
- Visitor management,
- Room reservation.

Additional features:

- Intercom,
- Elevator management,
- CCTV (Closed-Circuit TeleVision),
- ANPR (Automated Number Plate Recognition),
- Smart locks (Aperio),
- BMS (Booking Management System).

## ABOUT IPASSAN MANAGER

iPassan Manager software is both available in Cloud version and local version.

This software allows to: follow controllers' statuses in real-time, remotely open doors, manage elevators, track events, remotely modify sites, features, users and access levels in real time.

The initial configuration to be realized through the wizard is easy since it can be done in a few steps.

IPASSAN RANGE: FROM IPASSAN CONTROLLERS TO ACTIVATION CARDS

ABOUT IPASSAN CONTROLLERS

Thanks to iPassan modularity, a controller can control up to 4 doors and receive additional options as extensions, inputs, outputs and modules. iPassan is not limited in the number of doors. Our multi-door controller can operate standalone, without any internet connection as it runs normally and stores data locally even when internet connection is down.
