# DESIGN & BUILD, THE ASSURANCE OF CUSTOMIZED SUPPORT

## DRAWING UP SPECIFICATIONS

Thanks to its expertise in designing and producing of electronic systems, FDI is able to produce specific specifications. FDI can also work on the basis of existing specifications following feasibility studies. FDI's objective is to provide electronic solutions fully adapted to its partners' needs.

## RESEARCH & DEVELOPMENT, A DEDICATED DESIGN OFFICE

To remain at the cutting edge of innovation, FDI invests every year in its R&D department. With 70 engineers, FDI design office is agile, adjusting its working methods according to customer needs and project specifics. Design office is structured into 4 skills centers for specialized expertise:

## CONCEPT AND DESIGN

FDI designs its products in-house, thanks to its design office and innovation unit, in line with its objectives:

- ↳ Manage and optimize the product lifecycle,
- ↳ Reduce the environmental impact of its products,
- ↳ Ensure high levels of reliability and performance,
- ↳ Ensure product traceability.

To achieve this, FDI handles electronic component sourcing, prototyping and product validation.

## EMS 4.0 INDUSTRIALIZATION AND PRODUCTION

FDI masters the industrialization of electronic assemblies designed to integrate access control, intercom, proximity reader or IoT products. FDI's expertise enables us to adapt each plan to industrial processes required for volume production. FDI also provides support in choosing components and assists its customers in defining standards applicable to each product and its application

## TECHNICAL SUPPORT

FDI provides support tailored to customers' needs:

- ↳ Sustainability: hardware & software obsolescence management,
- ↳ Repairability: long-term storage of components, after-sales service,
- ↳ Logistics: inventory management based on forecasts or fixed orders.
